

MEDICAL INTELLIGENCE AND VALIDATION

Decision DOC AI is the central technology that empowers the rest of our software initiative in Clinical Speed. This platform was developed to give a physician the maximum visibility of a patient's potential disease state from the subjective input at intake.

This platform is an enterprise technology allowing multiple staff access and multiple location management. Users include providers, nurses, receptionists, records keepers and practice managers.

There are several ways to access the evidenced data of our analysis, download patient master reports for your EHR, and a dashboard for provider quick review.

Decision DOC qualifies all of the potential CPT and ICD protocols associated with the intake qualifications. This includes research links for everything evidenced.

Gives immediate access to the potential medical necessity for the ordering of 298 different laboratory services found within standard Clia licensed Laboratories.

including nerve conduction studies, CAT scans, MRI, and many more.

Gives the intake qualifications for medical necessity to order 21 potential next steps examinations

FULLY INTEGRATED WITH THE AI DATASET OF CHATGPT 4

The Artificial Intelligence engineering world is merging with the Medial industry. We are a pioneer in this space, bringing first to market AI provider programs in treatment protocol and so much more. The AI of ChatGPT 4, the industry leading AI engine, has been fully integrated into Decision DOC AI.

- Our platform generates AI for suggested treatment protocols concerning each of the initial findings mentioned in the last side generated by intake.
- Our AI will generate a full list of related medications to the findings with a description of each and their benefit to the issue presented.
- Our AI generates lifestyle and wellness suggestions based on the exact criteria of our intake and all other generated context.
- Our AI generates example physician/patient discussions on each potential disease analysis. This gives physicians the opportunity to review and prepare to cover all necessary areas of focus in patient education.

Perspectives matter and knowing what other professionals may recommend is one of the reasons we refer patients. Our AI platform will generate opinion for most other physician taxonomies to help you decide to refer or not. Our AI engine will re-evaluate all the data from the perspective of other taxonomies for you, including Cardiology, Neurology, Oncology and several others.
